**CELL LINES AND HOST NUCLEIC ACID SEQUENCES RELATED TO
INFECTIOUS DISEASE**

ABSTRACT OF THE DISCLOSURE

5 Host nucleic acids and host proteins that participate in viral infection, such as
human immunodeficiency virus (HIV), influenza A, and Ebola virus, have been
identified. Interfering with or disrupting the interaction between a host nucleic acid or
host protein and a virus or viral protein confers an inhibition of or resistance to
infection. Thus, interfering with such an interaction in a host subject can confer a
10 therapeutic or prophylactic effect against a virus. The sequences identified can be used
to identify agents that reduce or inhibit viral infection.
